1. What are the major strengths and weaknesses of the instructor?
   Strengths: Try to let student understand what the main topic of the subject is.
   Weaknesses: Assignments are too tough, too much work load.

2. What aspects of this course were most beneficial to you?
   The conceptual things.

3. What do you suggest to improve this course?
   Try to understand student's level. Assignments are kind of overkill, I'd consider it's kind of unreasonable.

4. Comment on the grading procedures and exams.
   N/A for homework, no HW is returned till now. Exam is OK.

OTHER COMMENTS:

Too tough in general. This is only a beginning level class of Java. Even though I try very hard, still didn't learn really well.

4. Comment on the grading procedures and exams.

However, it is the fault of perhaps inadequate prerequisites and not the fault of the instructor.

OTHER COMMENTS:

I have only one issue with this course. The instructor is very good - however, the students in the class caused substantial time to be wasted because they did not understand basic, prerequisite-level topics such as program logic and control structures. This caused significant time to be wasted explaining these basic ideas. I am upset that my time and money was spent this way in a grad-level course.
